

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

5        Claim 1 (currently amended): An electrical card connector, comprising:  
a base formed with a plurality of slots having different widths or heights and sharing a common space, and an insert port for the plurality of slots being formed at a front end of the base; and

10        plural rows of terminals each having a contact and a connection, the contact, which is elastic and positioned within the base, being to be connected to an electrical card, wherein one of the slots is a bevel slot that is tilted inwardly and downward from the insert port, the base has a bottom base, the bottom base has a first concave surface and a second concave surface, the first concave surface is more concave than the second concave surface, and the first concave surface is gradually tilted inwardly from the insert port.

15        Claim 2 (currently amended): The electrical card connector according to claim 1, wherein:

the base further has a ~~bottom base~~, a middle board, and an upper cover;  
~~the bottom base has a first concave surface and a second concave surface;~~  
~~the first concave surface is more concave than the second concave surface;~~  
20        the first concave surface is gradually tilted inwardly and downward from the insert port;

the middle board is arranged on a top of the bottom base;  
a first convex surface is formed on a bottom surface of the middle board;  
the first convex surface is gradually tilted inwardly and downward and  
25        corresponds to the first concave surface; and  
the upper cover covers over the middle board.

Claim 3 (currently amended): The electrical card connector according to claim 1, wherein the upper cover is a metal housing.

30        Claim 4 (currently amended): The electrical card connector according to claim 1, wherein:

the base further has a ~~bottom base~~, a middle board, and a top base;

Appl. No. 10/761,602  
Amdt. dated May 9, 2005  
Reply to Office action of 02/15/2005

- ~~the bottom base has a first concave surface and a second concave surface;~~  
the first concave surface is ~~more concave than the second concave surface~~  
and is gradually tilted inwardly and downward from the insert port;  
the middle board is arranged on a top of the bottom base;  
5 a first convex surface is formed on a bottom surface of the middle board;  
the first convex surface is gradually tilted inwardly and downward from the  
insert port, and corresponds to the first concave surface; and  
the top base is arranged on the middle board and has an upper slot.
